

Meeting Module

Names: J��ssica, Gabriele & Luis
Topic(s): Mechanical problem formulation
Date: 9/17/26

Was there a final file made Y/N: 9

Where was it uploaded (GITHUB/DRIVE): Github

What did you do in the meeting?

We talked about the problem formulation and we did a small draft of what the p.f could be.

- Velocity 0.2-0.6 m/s
- Avg diameter 30cm +-2cm
- Max weight 2.5kg
- Height 12-15cm
- Avg debris collection: 30%
- Avoid obstacles and recognizes when stuck, if so beeps an alarm
- Easily disassemblable for easier maintenance
- Frontal brushes to ensure debris collection
- Robot moves 360   on its axis
- Sealed from dust entering components
- Sufficiently stable during travelling, acceleration, deceleration and turning
